

Modular washing lines.

Washing, rinsing and drying.

The modular design has always been our strength since it allows you to personalise the line most suitable for your needs.

Choose among the various HD ultrasound washing machine models to combine one or more rinse basins in running or still water, for example for distilled water, complete an additional ultrasound phase and finally dry your objects in the hot-air drying VC Mod. oven. And all this can be accomplished in a continuous manner, using the same baskets or hooks.

Our technical department will be pleased to recommend the best solution to satisfy your needs.

Main features:

DRYING

- Adjustable temperature up to 200 °C
- Digital temperature control

WASH AND RINSE

- Automatic tank filling
- Overflow for oils or foams of washing on the upper edge of the tank
